Teaching Speaking Skills

Eyüp Yaşar KÜRÜM, PhD, Hacettepe University, Ankara, Turkey

Abstract

Speaking is considered to be the mostly sought skill for an individual to be accepted competent in a foreign language. Speaking is more than to form grammatically correct sentences; it rather covers broad areas of mechanics, functions, pragmatics and social interaction. Therefore, any foreign language teaching methodology used in the classroom throughout the history has always sought to develop ways to improve the competency of learners in these areas. In contemporary methodologies the emphasis in speaking is fluency rather than accuracy. In a typical classification the speaking activities in a foreign language classroom usually falls into one of these categories: Awareness raising activities, Controlled activities and Autonomous activities. There are also some speaking strategies that can be implemented to encourage the unmotivated students to produce speaking.

Keywords: Speaking, Speaking Competence, Types of Speaking Activities, Speaking Strategies.

1. Learning objectives

On successful completion of this chapter, you will be able to:

- Define and list the basic concepts and terminology about speaking skills.
- Develop an insight about the historical background of teaching speaking skills.
- Recognize and prepare awareness raising classroom activities
- Use the strategies to motivate the students to get engaged in speaking activities.

2. What is Speaking?

When we talk of a person who knows a language, we usually tend to mean that that person is able to produce meaningful sentences in that language; in other words (s)he can speak that language. Thus the claim that *(S)he knows English* usually includes the statement that *(S)he can speak English*. The teaching of a second or foreign language therefore, one way or other covers the teaching of speaking skills. It is safe to assume that many learners starting to learn a foreign language usually seek an improved competency in their productive skills; namely writing and speaking. These learners assess their progress in the target language in terms of their ability to speak fluently in communication.

As common sense and research suggests, speaking is more than to form grammatically correct sentences and then to pronounce them. A well-known example of such a grammatically correct, however semantically ill-formed sentence "***Colorless green ideas sleep furiously***" was composed by Chomsky in 1957. Language teachers then need to recognize that speaking involves more than mechanics. The three areas of knowledge that composes speaking ability can be stated as follows:

- Mechanics (pronunciation, grammar, and vocabulary): Using the right words in the right order with the correct pronunciation
- Functions (transaction and interaction): Knowing when clarity of message is essential (transaction/information exchange) and when precise understanding is not required (interaction/relationship building)
- Pragmatics, Social and cultural rules and norms (turn-taking, rate of speech, length of pauses between speakers, relative roles of participants): Understanding how to take into account who is speaking to whom, in what circumstances, about what, and for what reason.

Taking into consideration these broad areas of knowledge, second language teaching methodology has switched its emphasis on various objectives throughout the history of language teaching. In the following section, taking a look at the varying emphasis of objectives of language teaching approaches in history will give us a better understanding on the topic.

3. Historical Background

At present, developing fluency not just the accuracy has become a major objective in language teaching methodology (Brown, 1993). However, the emphasis on the communicative value of language teaching is not actually new. When we look at Kelly's (1969 in Stern 1991) historical study of the language teaching methods, we realize that the issue has pursued three major objectives:

- social (language as a form of communication),
- artistic literary (language as a vehicle for artistic creation and appreciation),
- philosophical (linguistic analysis).

Depending on these general aims of language teaching, the objectives of the teaching have been emphasized to varying degrees. According to Kelly's (1969) classification, language teaching in the Western world can be divided into five main periods:

- The Classical Period (from ancient times to the 4th century)
- The Middle Ages (4th century – 14th century)
- Renaissance (14th – 16th centuries)
- The Age of Reason (16th – 19th centuries)
- The Modern Period (from 19th century on).

The emphasis of the language teaching has changed along with the role of languages in society. In classical Rome for example, people learned Greek for purposes varying from social communication to transmission of literary and intellectual thought. According to Kelly, the language teaching in the Classical Period, the Renaissance and the Modern Ages are parallel. There is another parallel between the Middle Ages and the Age of Reason.

Since people learned a foreign language mostly for social purposes, the communicative objectives were emphasized in the Classical Period, the Renaissance and the Modern Ages. However, in the Middle Ages and the Age of Reason, the language teaching objectives shifted towards written and analytical skills. Therefore, teaching speaking skills in these periods were not needed to be emphasized as much as they were done in the Classical, Renaissance and Modern ages.

From 1850s to 1950s, Grammar-Translation method was one of the most eminent language teaching methods. In this method, the language practices were usually in written forms and listening and speaking skills were seen as the apex of language ability (Lowe, 2003). Therefore, the teaching of speaking skills in this method was not a relevant issue. On the other hand, the Direct Method which became prevalent in 1890s took speaking and listening as the most important skills. The medium of instruction was a strict use of the target language. Learners studied sequences of carefully planned grammatical phrases by listening and repetition; grammar 'rules' were avoided, and replaced by phrases. These phrases had structures of grammar disguised in them. Vocabulary was learned either incidentally, as part of the phrases being taught, or via lists grouped under types of situation (Lowe, 2003).

The World War II had a significant effect on language teaching in the U.S. first and then eventually in the entire World. The need to supply the Army with fluent speakers of major European and Asian languages led the training of personnel with an innovative and ground-breaking language teaching program. Since the conventional language methodologies of the time were not sufficient to train proficient speakers of any language, a new approach was needed. Thus the government commissioned 55 major American universities to prepare a special program in 1942. The Army Specialized Training Program (ASTP), which was established in 1943, aimed to train the students to achieve conversational proficiency in a variety of foreign languages. This program gained a surprisingly high success during the war years.

The emergence of the popular post war Audio Lingual Method was due to the effect of the Army Specialized Training Program (Richards & Rodgers, 2002). In this method, the speaking skills were promoted through listening and repeating as foreseen in the behavioral psychology. The repetition activities were believed to achieve automation of speaking skills and language was accepted as a continuum of hierarchically formed structures from easy to more complex (Morley, 1993).

In 1960's, Chomsky's reasonable criticisms of the structural and behavioral linguistic theories led to significant changes. According to Chomsky, language is not a matter of habit formation. The creativity

aspect of language cannot be explained through habit formation. Chomsky's transformational grammar theory explains the acquisition of language rules only through an innate biological mechanism of individuals. Chomsky calls this mechanism Language Acquisition Device (LAD).

After Chomsky, the structural language teaching methodologies based on explanation, repetition, memorization, drills and production lost their popularity. Especially, after 1970's the Communicative Language Teaching (CLT) underlined the importance of focusing on the functional and communicative aspects of language rather than the grammar and vocabulary building (Richards&Rodgers, 2002). The CLT emphasizes the learner's understanding and explanation of the language functions and notions. With this methodology, learner's acquisition of communicative competency is the main purpose (Finocchiaro & Brumfit, 1983). Regarding this, the speaking skills are taught through meaning based dialogues, group works and language activities as authentic as possible. Fluency is more important than grammatical accuracy.

The Natural Approach proposed by Tracy Terrell & Stephan Krashen in 1977 is based on learning through comprehensible input when the learner is affectively ready to receive it. In this approach, the importance of speaking is not by itself but rather its potential in providing comprehensible input (Krashen, 1987, p.61). According to Krashen (1987), the fluency in speaking is not achieved through speaking drills but rather by understanding the input in listening and reading. In other words, speaking is the result of comprehension level, not its cause. The role of speaking in acquisition is an indirect role of its contribution to comprehension.

There are also a number of other scholars who have different perspectives than Krashen about the role of teaching speaking on language acquisition. Scholars taking language acquisition from a socio-cultural perspective claim that a person's full acquisition of a language only occurs through interaction of individuals in various social situations, in other words speaking is the cause of acquisition (Long, 1983). Swain's (1985) Comprehensible Output Hypothesis claims creating situations in which learners speak and write is essential for language acquisition.

Today, comprehensible input and social interaction including negotiation of meaning are considered to be the most essential two factors in second language acquisition (Faltis, 1993, p.101). Therefore, in any language teaching program making learners achieve their communicative goals in effective and interactional English speaking situations and making them gain speaking skills are principal goals.

Regarding this, in the next chapter we will now focus on the examples of classroom practice for teaching speaking skills.

4. Classroom Practice

The desired outcome of any activity in a foreign language classroom is usually achieved through the effective construction of the teacher. Based on Harmer's (2007) model, an instruction unit should consist of the following stages:

- *Introduction:* Explaining learners the purpose of the current lesson. Asking them to lay out their background knowledge on the topic. For example, if the topic of the lesson is purchasing a plane ticket to go abroad, students can be asked to guess the content of a possible conversation taking in a travel agency.
- *Presenting the task:* In this stage, what we expect from the students to do should be explained clearly. For example, if the teacher wants the students to make a dialogue with their partners on a given topic, (s)he can make a similar dialogue with a student as a first step. To check whether the task is understood clearly by the students, they can be asked to repeat the process. This can be done in English or Turkish depending on the level of the students. In addition, students should be given all the necessary role cards, pictures, listening and reading texts, etc. about the task.
- *Observation:* The teacher's keeping track of the activity going on in the class. Teacher intervenes whenever required. This intervention does not necessarily involve the correction of errors, but rather ensuring the students' progress according to the objective of the lesson.
- *Feedback:* To make the students learn about their performance at the end of the activity. In this stage, a feedback on the content of the activity rather than the grammatical accuracy would be more appropriate. Informing students what they have achieved is better than saying them what they have failed. Such a feedback would contribute to their inner motivation, sense of achievement and self-confidence. This would also have a positive contribution to low affective filter which is considered to be an essential condition in language acquisition by Krashen (1987).
- *Follow up Activity on the Topic:* Finally a follow up assignment to reinforce the activities in the lesson can be given. For example, if the topic of the lesson was about speaking

activities on purchasing a plane ticket for an abroad flight, the homework could be a research on how to purchase the same ticket on the internet and presenting the data on the following class.

We can summarize the above mentioned instructional stages in Figure 1.

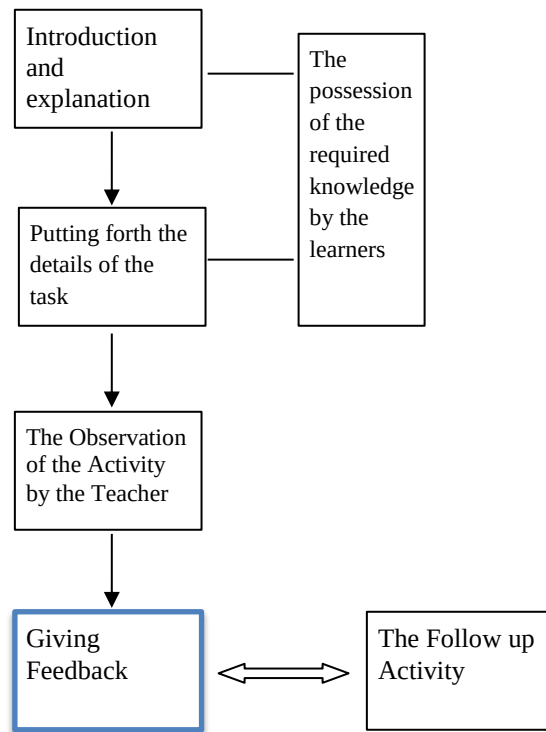

Figure 1. The Stages in a Speaking Class (Adapted from Harmer, 2007).

5. The Types of Classroom Practice Activities

A. Awareness Raising Activities

According to Cognitivism, awareness raising is the prerequisite stimuli that either restructure or awaken the learner's mental representation (Thornbury, 2005). In the awareness stage, the learner performs activities that enable him/her to notice a new knowledge or situation. According to Thornbury (2005), awareness consists of the following processes:

- **Attention:** Raising interest, curiosity and a desire for involvement on the features of the target skill.
- **Noticing:** This is more than just paying attention. For example, while driving a car, we pay attention to the road without noticing until a rabbit appears in front of us. We immediately notice it away from the other details on the road. Just like that, a learner learning a new word can see it in many different places, because (s)he is now noticing it.
- **Understanding:** It is the last process. We cannot talk about a real noticing without understanding. Understanding is noticing a general rule or system and comprehending the relation of the subparts between each other and how these parts interact.

To be an example of such awareness activities, we are here presenting a part from Neville J.H. Grant and C.R. Wang'ombe's course book *English in Use* published in 1980. In this activity, the learner performs an awareness practice on the likely problems of communication in daily life conversations and (s)he practices the required language to overcome these communication challenges.

Communication problems

Communication problems occur even when speaking your own language, caused by:

- noise or distance: making it difficult to hear or understand
- time pressure or anxiety: making it difficult to organize your thoughts
- memory failure: forgetting the right word or not concentrating
- complexity: what you want to say is difficult to say

You can repair these problems.

English in use

Repair strategies

1 Listen again to Lynn and Mick. What communication problems do they have? Number them 1 to 4.

can't remember the right word(s) ☐

accidentally uses the wrong word ☐

has trouble forming the sentence ☐

doesn't hear / understand ☐

1 Lynn So some time later you buy bread, and when you've done it you don't need to restore, er to store that memory any longer ...

2 Mick Are there any ..., are ..., are any memories really permanent?

3 Lynn ... you start to get confused.
Mick Sorry?
Lynn You get confused.

4 Mick Interconnections?
Lynn Yeah, I can't remember the right word, but that's the problem.

2 When do we use these repair strategies?

1 Say 'Sorry?'

2 Say 'I can't remember / I don't know the right word', then suggest some possible words

3 Say er / um, then say the right word

4 Just stop, pause, and start again

3 Describe one of these. Can your partner guess what you are talking about? Use the repair strategies when you have problems.

a job
a machine
a musical instrument
a sport

Repair Strategies to Overcome Communication Challenges (Thornbury, 2005, p. 42)

Another way to raise the awareness of the learners about the features of daily life conversations is to make them listen to samples of daily conversations and later study on the scripts of these conversations. Here, the likely difference between the real daily conversations and course book conversations can be emphasized. The course book conversations usually do not reveal features of pausing, repetition, reflection that usually help better understanding in daily life conversations. For example, the following excerpts taken from J. Coates's *Men Talk* compare the two versions of the dialogue on the same topic in real life and course book (Thornbury, 2005).

Speaker 1: I went in and bought some stupid things this morning in Boots, twenty-five p, [laugh] for twenty-five p you could be as silly as you want to couldn't you? Silly aren't they? Oh what fun. Silly green nonsense. Children's bead earrings.

Speaker 2: You got green?

Speaker 1: I've got a green jumper which I wear in the winter

Speaker 2: Yeah that's fine

Speaker 1: So I thought I would. I'm – am very fond of my green jumper, silly pair of green earrings to go with it.

Speaker 2: Why not?

Speaker 1: It's a laugh. There was another lady there looking through all the stuff where I was and she said to me, 'Isn't it fun?' [laugh] and I said, 'Yes, only twenty-five p,' [laugh] Absurd.

Earrings 1 (authentic version)

An authentic version of a conversation on ear rings (Thornbury, 2005, p. 43)

Speaker 1: What nice earrings!

Speaker 2: I bought them this morning.

Speaker 1: Where did you buy them?

Speaker 2: I bought them in Boots.

Speaker 1: How much did they cost?

Speaker 2: Only twenty-five p.

Speaker 1: What a bargain!

Speaker 2: I'm going to wear them with my green jumper.

Speaker 1: What a good idea!

Earrings 2 (coursebook version)

The course book version of the same conversation (Thornbury, 2005, p. 44)

The learners' attention can be drawn to the fact that in the course book version of the dialogue, the daily spoken language's natural features like the interruption, waiting for the other speaker's pause to take over the conversation or starting to talk without waiting the other part, etc., are not seen at all. The learners can be asked to state their opinions why these two versions differ and how the course book version of the dialogue can be changed to make it more authentic.

Making students hear real life spoken English samples excerpted from real TV or radio shows is a beneficial awareness raising activity. There are points however that should be taken into consideration. These are:

- Activating learners' already existing background knowledge on a topic increases comprehension. This background activation is more essential especially in hard topics. For example, if the learners are supposed to hear a speech on a comparison of hybrid engine cars with traditional benzine cars, they would be asked to carry out a brainstorm session to find the already possessed vocabulary on the topic. In this way, a useful vocabulary activity and an awareness raising can be done simultaneously.
- After the first listening or watching, general questions such as the following should be asked:
 - *'Who is talking with whom?*
 - *What are they talking about?*
 - *Where are they?*
 - *What is the relation between the speakers? Are they friends, relatives, colleagues, etc.?*
 - *Why are they talking? What is their purpose?*

The above like questions would help the teachers to find out the general comprehension of the learners. The determination general understanding is a prerequisite for developing detailed activities on the topic.

- Then, activities aiming for detailed comprehension should be done. Such activities can be filling out a table, answering multiple choice questions, sentence completion, matching, etc. In this stage, the text can be listened or watched a few times until the learners can answer the majority of the questions with ease.
- If the language used in the text has some peculiarities, learners' attention can be drawn to these language pieces. For example, expressions like *you know / I know, as a matter of fact, by the way*, etc.
- If there are some sociocultural aspects of language are revealed in the spoken language, these parts should especially be made noticed. Such examples revealing the culture of the target language would raise cultural awareness. For example thanksgiving, street musicians, employer-employee relations, the status of women in the society, methods of saving money, etc. can vary between the cultures. In the texts that such cultural aspects are the speech topic, the teacher

should make explanations on cultural aspects. Comparing and contrasting the mother tongue culture and the target language culture could be a useful discussion topic.

- The grammatical aspects of the spoken language can be underlined. For example, the intensity of the words in written and spoken languages is different. The intensity of the words mean the rate of the content words in the text. In spoken language, the intensity is less than the written language.

B. Controlled Activities

Making learners to become fluent speakers, controlled practice helps them to learn the control of speaking skills. Drill and chants, in this case involve practicing that control. In a drill type exercise the learner is given words, phrases and even whole utterances to mechanically repeat and imitate so that (s)he is supposed to notice and use the piece of useful language supposed to be produced automatically in everyday conversations.

In such an activity taken from Thornbury (2005), students first listen to a recording of a conversation in which a number of useful formulaic expressions are embedded. After the teacher ensures the content of the conversation is comprehended well, the recording is played again, but this time the teacher pauses the recordings at strategic points and the students repeat the already heard chunk in chorus. Then, a few individuals repeat the same key phrases until a certain degree of confidence in producing these phrases are achieved. A sample activity of this kind is given below:

Recording	Students
A: Hey, Barry, what a great tie! B: Thanks. Actually, I've had it for ages, but I never wear it.	
A: It suits you. [pause]	(Chorus) It suits you. (Individual 1) It suits you. (Individual 2) It suits you. (Individual 3) It suits you.
Listen, Barry, I was thinking, do you fancy lunch together some time this week?	
B: That'd be nice. [pause]	(Chorus) That'd be nice. (Individual 1) That'd be nice. (Individual 2) That'd be nice. (Individual 3) That'd be nice.
What about Friday? A: Perfect. Do you mind if I ask Jackie? B: Well, actually, I'm sorry Al,	
I'd rather you didn't. [pause]	(Chorus) I'd rather you didn't. (Individual 1) I'd rather you didn't. (Individual 2) I'd rather you didn't. (Individual 3) I'd rather you didn't.
etc.	

A sample drill conversation with formulaic utterances embedded (Thornbury, 2005, p. 65-66)

The use of chants and songs can be a more playful and fun form of practice to repeat the formulaic expressions. A list of such expressions can be given from Thornbury (2005). (see below)

Discourse markers:

by the way	that reminds me	as I was saying
while I remember	before I forget	talking of which

Or these sentence starters:

Do you mind if I ... ?	The thing is, ...	Do you happen to know ...?
Do you think you could ... ?	Would it be OK if I ... ?	

Or social formulas and useful expressions:

How do you do?	See you later.	Just looking, thanks.
Can I take a message?	How do you spell that?	

Or catchphrases and idiomatic phrases:

Better late than never.	Long time no see.	Look who's talking.
It's on the tip of my tongue.	The sooner the better.	

C. Autonomous Activities

Since one of the main objectives of the foreign language class is to create autonomous learners who achieve a certain degree of fluency and automaticity in speaking competence, activities requiring the learner to produce authentic language should be carried out. According to Thornbury (2005), the speaking activities that enable the learners to produce autonomous language should include the conditions of productivity, purposefulness, interactivity, challenge, safety and authenticity.

Productivity includes the maximal new language production rather than just exchanging certain phrases.

Purposefulness is the clear and well defined outcome of the language activity usually achieved through cooperation among learners. **Interactivity** is the learner's consideration of the effect (s)he is having on his/her audience. **Challenge** means the difficulty level of the task. The task that the learner is engaged should be a little bit above the current language level of the learner. This challenge enables the learner to force himself/herself to stretch his/her available communicative resource. This challenge condition is

actually in accordance with Krashen's (1987) i+1 comprehensible input principle. **Safety** is the learner's feeling of self-confidence of not having too much risk while dealing with challenging tasks. It includes supportive, non-judgmental and encouraging classroom atmosphere for making errors. **Authenticity** is the relation of the speaking tasks to real life language use.

With regard to autonomous speaking activities Blaine Ray's (2014) Teaching Proficiency Through Reading and Story Telling (TPRS) offers a variety of techniques and activities. Ray believes students should be given enough opportunities to express themselves in a stress free environment, not just repeat memorized lines. Some examples of autonomous speaking activities in a TPRS class are given below:

Team Retell: You can use this activity after a story to get students speaking without calling on specific students and forcing them to speak. First, split the class in half and have both sides of the class stand up. Students take turns saying sentences from the story and receive points or lose points as follows:

- Five (5) points for each NEW (previously unsaid) sentence from the story that is said by a team member that has NOT already contributed.
- Three (3) points for each NEW (previously unsaid) sentence from the story that is said by a team member that HAS ALREADY contributed.
- One (1) point for each sentence from the story that has already been said, as long as it is said by someone that has NOT already contributed. Even though it's a repeat, the goal is to get kids talking in a low-pressure situation and to get in repetitions of the structures.
- Zero (0) points for each sentence from the story that has already been said, if it said by someone that HAS ALREADY contributed. This will prevent kids from just repeating one or two statements forever.

Story Telling Cube: In order to do this activity, you will need to create storytelling cubes for your students. One cube should have a different character on each side and the other cube should have a different problem image on each side (ie. thunderbolt, broken heart, etc.) Once students have rolled each cube, have them come up with a story. This activity is very flexible and could be used as a speaking or writing activity. Students can work individually, in pairs, or in groups, depending on what you want them to accomplish. You can even hand out a cube template and allow students to make their own storytelling cubes. This way they get to decide which characters and problems they want to use.

Free Reading Discussion: After your class has spent some time free reading, it is nice to have some sort of activity to do. Since we don't want to make students dislike free reading by assessing it, one activity that you can do is to help students have a discussion. Put some examples on the board of things that they can say about their books and then model a few sentences for them and tell them a little bit about your book. Put students into groups and have them tell the other students about their own books. It is nice if they still have the books at this point because they can show them to the other students at the same time. After everyone has finished sharing with their group, ask for volunteers to share something about their book with the whole class. These statements that the students provide can then be circled and you can ask lots of questions and compare different students' books, which will provide lots of comprehensible input to your students.

(Retrieved from <http://tprsteacher.com/category/activities/speaking/>)

6. The Motivation of the Learners

In a speaking class, some learners might be unmotivated to attend the class due to various reasons. For such learners Harmer (2007) proposes some strategies taken from Helgesen (2003 in Harmer, 2007). A strategy for such learners can be making a mental plan in advance and rehearsing it for a few times before starting to talk. For example while traveling by bus, the learner can imagine himself/herself traveling in a taxi and making up imaginary talks to give directions to the taxi driver for the destination. Or they can make up imaginary talks to explain a friend the best or the worst thing occurred on that day. Making up such imaginary talks can reduce the anxiety of speaking for the learners. An over anxious learner having to present a speech before his/her class can pre-record his/her speech and give it to the teacher to have a feedback before the actual presentation date. This can reduce his/her stress about the speech and make him/her feel more comfortable before the class (Mennim, 2003).

Having learners form discussion groups can be another strategy for encouraging learners to become more motivated contributors to the speaking activities. Before discussing the topic, the learners can be asked to brainstorm on the topic and think about it deeply before the actual discussion starts. Some unwilling, shy students can think they cannot express themselves clearly in large groups. In such cases, smaller groups can be formed in which shy students have a better share of speaking.

In some cases, the students can inhibit himself/herself from speaking whatever is done. If so, these learners can be coerced. For example, in a group activity consisting of 4 students each student can be given a part of a whole text and the students can be asked to share the information covered in their parts with the others so that they will be able to answer the comprehension questions at the end of the passage.

In this activity, every student should contribute to the practice to accomplish the task. As proposed by Merrill Swan's Comprehensible Output Hypothesis in 1985, learners learn speaking by speaking (Lynch, 2003, p.33). Or from the point of view of Krashen, speaking is important to provide comprehensible input. Therefore, especially for advanced level students more speaking activities that enable students to exchange communication practice should be incorporated into the syllabus.

7. A Sample Lesson Plan

Subject: Asking Questions

Lesson No.:

Date:

Room No:

Teaching staff:

Learning objectives:	Students will be able to - ask questions about a piece of information that they would like to learn about, - interview with their classmates.
Materials	- Listening and Speaking Strategies video at https://www.youtube.com/watch?v=4zRgNymCB7w - Pencils and erasers. - "Have You Ever..." search paper, 1 copy per student. A piece of white paper divided into 16 equal squares with four columns down and four rows across. At the bottom of each square there is a piece of information at least one student in the class may have experienced or a quality at least one student may have, such as "broken a bone," "loves pizza," "speaks two languages," "has been on an airplane," or "good dancer." - Computer with Internet access (optional)
Warm up activity:	Ask students if they know their classmates well. Do they like to learn more about their classmates? Let them know that in today's activity, they will learn new information about their classmates.

Procedures	To begin, play a few rounds of telephone with the class to demonstrate the importance of having good speaking and listening skills. Then have students watch Speaking and Listening Strategies to further explore good skills. After watching the program, talk about experiences when students have to ask questions or follow directions. Ask them: Why is it important to give clear directions? What kind of situations have you been in when you have had to listen very carefully to someone talking? Why is it important to develop good speaking and listening skills? Have students describe situations when they have not used good speaking or listening skills. What were the results? Explain the students that they will play a scavenger hunt-type game with their classmates. Hand out copies of "Have You Ever?" and tell students that the object of the game is to be the first person in the class to complete the squares. To do so, they must match a classmate's name to the criteria written in a square. Each square must represent a different person, so a winning "Have You Ever?" sheet cannot have one student's name on it in more than one square. Tell students that they will walk around the classroom and ask their classmates questions to fill in the squares on their sheet, such as "Have you ever broken a bone?" If a classmate has broken a bone, they meet the criterion, and the student should write the classmate's name in that square. If not, the student can choose to ask the person a different question or move to a different classmate until they have found one who has broken a bone. Explain to students that they will also answer questions. For example, if Ediz is asking Tülay a question, he cannot leave her when she has answered his question. He should wait until Tülay asks her question and they are both ready to move to new classmates. Remind students that everyone in the classroom will be working on their scavenger hunt at the same time, so it is important that students use indoor voices, listen to what their classmates are saying very carefully, and not to run. The first person to fill in all of their squares without repeating a name wins. Tell students to raise their paper and call out if they think they have won.
--------------------------	--

	Give students time to complete their scavenger hunt. Walk around the classroom while students are engaged to make sure everyone is playing fairly and nobody is running. Call time when a student has announced they have finished and have students quietly freeze where they are standing while you check the possible winning sheet. If the student is mistaken, have the class resume the activity. If not, ask students to return to their seats. Discuss the scavenger hunt with students. Who learned something new about their classmates? What did they learn? Why was it important to use good listening skills during the scavenger hunt? Why was it important to use good speaking skills? Choose one of your friends and talk about him/her? What are his/her likes and dislikes, what are the things you like about him/her, etc.
--	--

Evaluation	Use the following three-point rubric to evaluate students' work during this lesson. <i>Three points:</i> Students were highly engaged in class and group discussions; enthusiastically participated in the scavenger hunt; followed the rules of the scavenger hunt without needing teacher guidance or supervision; and demonstrated a clear understanding of the importance of having good speaking and listening skills. <i>Two points:</i> Students generally engaged in class and group discussions; participated in the scavenger hunt; followed the rules of the scavenger hunt with little teacher supervision or guidance; and demonstrated a basic understanding of the importance of having good speaking and listening skills. <i>One point:</i> Students participated minimally in class and group discussions; were unable to participate in the scavenger hunt without constant teacher supervision or refused to participate in the scavenger hunt; and were unable to demonstrate a basic understanding of the importance of having good speaking and listening skills.
